

Resonance-Based Subspace Dynamics (RBS-D)

Publication No. 0 / 24 — Masterpaper 00

Entry Point and Consolidated Overview of the RBS-D Series

Author: Tobias Wolfelsperger

QUICK ENTRY GUIDE (RBS-D — MASTER VERSION WITH DOIs)

This document is the central entry point into the 24-part RBS-D series. It provides a structured overview, thematic orientation, phase structure, and the complete DOI-indexed thematic map.

Guided Entry Paths

Fast conceptual entry (core structure) → Publication 02 — DOI: 10.5281/zenodo.18213120 → Publication 03 — DOI: 10.5281/zenodo.18293577 → Publication 10 — DOI: 10.5281/zenodo.19163630

Structural dynamics perspective (system evolution) → Publication 08 — DOI: 10.5281/zenodo.18771238 → Publication 09 — DOI: 10.5281/zenodo.18991765 → Publication 18 — DOI: 10.5281/zenodo.20748120

Physical interpretation (emergent structures & stability) → Publication 11 — DOI: 10.5281/zenodo.19331799 → Publication 12 — DOI: 10.5281/zenodo.19461780 → Publication 13 — DOI: 10.5281/zenodo.19520210 → Publication 14 — DOI: 10.5281/zenodo.19664145 → Publication 23 — DOI: 10.5281/zenodo.21069539

Applied / experimental regime (controlled dynamics) → Publication 14 — DOI: 10.5281/zenodo.19664145 → Publication 15 — DOI: 10.5281/zenodo.19735508 → Publication 16 — DOI: 10.5281/zenodo.20611825 → Publication 22 — DOI: 10.5281/zenodo.20754758

Geometric and CP² extension (advanced structural level) → Publication 17 — DOI: 10.5281/zenodo.20611826 → Publication 18 — DOI: 10.5281/zenodo.20748120 → Publication 19 — DOI: 10.5281/zenodo.19981704

Abstract (English)

Masterpaper 00 provides the consolidated structural overview, phase classification, and DOI-indexed thematic map of the 24-part Resonance-Based Subspace Dynamics (RBS-D) framework. It defines the conceptual architecture of the series, organizes all publications into coherent phases, and provides guided entry paths for readers approaching the theory from different disciplinary backgrounds. This document serves as the central citation node and navigation hub for Publications 1–24. It introduces no new theoretical results.

1. Purpose of Masterpaper 00

Masterpaper 00 provides: • unified structural overview • complete DOI-indexed thematic map • phase-based classification • guided entry paths • stable citation anchor

It introduces no new theoretical results.

2. Phase Structure of the RBS-D Series

Phase I — Foundational Theory (Publications 1–14)

Resonance-organized states, coupling structures, invariance classes, symmetry principles, emergent stability.

Phase II — Applied Resonance Engineering (Publications 15–22)

Regime transitions, threshold phenomena, projection geometry, CP^2 structures, axiom foundations.

Phase III — Physical Interpretation & Completion (Publications 23–24)

Publication 23 provides the complete physical interpretation of the mathematical and axiomatic foundations. Publication 24 defines the topological identity of the attractor and formally completes the first RBS-D framework.

3. DOI-Indexed Thematic Map of All Publications (0–24)

(Each entry includes DOI + thematic description)

Publication 0 / 24 — DOI: 10.5281/zenodo.20785828

Topic: Masterpaper 00 — Structural overview, phase map, entry paths, and full DOI index.

Publication 1 / 24 — DOI: 10.5281/zenodo.18144808

Topic: Foundational resonance states and basic subspace coupling principles.

Publication 2 / 24 — DOI: 10.5281/zenodo.18213120

Topic: Core conceptual architecture of resonance-based dynamics.

Publication 3 / 24 — DOI: 10.5281/zenodo.18293577

Topic: Emergent coherence structures and resonance alignment.

Publication 4 / 24 — DOI: 10.5281/zenodo.18366959

Topic: Invariance classes and structural symmetry principles.

Publication 5 / 24 — DOI: 10.5281/zenodo.18435119

Topic: Dual-role coupling and resonance-driven stability regimes.

Publication 6 / 24 — DOI: 10.5281/zenodo.18495419

Topic: Nonlinear resonance interactions and subspace transitions.

Publication 7 / 24 — DOI: 10.5281/zenodo.18663162

Topic: Structural resonance metrics and early stability indicators.

Publication 8 / 24 — DOI: 10.5281/zenodo.18771238

Topic: System evolution under resonance constraints.

Publication 9 / 24 — DOI: 10.5281/zenodo.18991765

Topic: Dynamic regime transitions and resonance thresholds.

Publication 10 / 24 — DOI: 10.5281/zenodo.19163630

Topic: Structural coherence and emergent ordering mechanisms.

Publication 11 / 24 — DOI: 10.5281/zenodo.19331799

Topic: Physical interpretation of stability fields and resonance cores.

Publication 12 / 24 — DOI: 10.5281/zenodo.19461780

Topic: Coherence fields, fibre structures, and domain formation.

Publication 13 / 24 — DOI: 10.5281/zenodo.19520210

Topic: Topological resonance structures and duality waves.

Publication 14 / 24 — DOI: 10.5281/zenodo.19664145

Topic: Stability–coherence duality, phase-wave formation, emergent structural locking.

Publication 15 / 24 — DOI: 10.5281/zenodo.19735508

Topic: Controlled resonance dynamics and experimental regimes.

Publication 16 / 24 — DOI: 10.5281/zenodo.20611825

Topic: Projection geometry and CP²-based structural extensions.

Publication 17 / 24 — DOI: 10.5281/zenodo.20611826

Topic: CP² resonance geometry and advanced structural manifolds.

Publication 18 / 24 — DOI: 10.5281/zenodo.20748120

Topic: Universal structural metrics and resonance-driven topology.

Publication 19 / 24 — DOI: 10.5281/zenodo.19981704

Topic: Universal attractor, entropy minimization, and synchronization laws.

Publication 20 / 24 — DOI: 10.5281/zenodo.20754380

Topic: Universal structural metrics and invariant measurement systems.

Publication 21 / 24 — DOI: 10.5281/zenodo.20754380

Topic: Axiomatic foundations of role systems and operator families.

Publication 22 / 24 — DOI: 10.5281/zenodo.20754758

Topic: Extended role spaces (ASM-31 / ASM-63), operator definitions, and full axiom completion.

Publication 23 / 24 — DOI: 10.5281/zenodo.21069539

Topic: Complete physical interpretation of RBS-D — role axes, fields, waves, solitons, universal metrics, and critical threshold $c_{\text{crit}} = 1$.

Publication 24 / 24 — DOI: 10.5281/zenodo.21070958

Topic: Topological identity of the attractor ($SU(2) \times SU(2) \times S^1 \times Z$), universal relaxation time $t_{\text{relax}} = 202$, and formal completion of the first RBS-D framework.

4. Integration of Publications 22, 23, and 24

Publication 22 — Axiom Foundations & Extended Role Spaces

Defines the complete axioms, operator families, role spaces, and the ASM-31 / ASM-63 extension.

Publication 23 — Physical Interpretation Layer

Provides the physical meaning of the role axes ($U1, U2, r, \phi$), the operators (M, W, T, D), the fields, waves, fibres, domains, solitons, and the universal structural metrics. Interprets the critical synchronization threshold $c_{\text{crit}} = 1$ as a sharp physical phase transition.

Publication 24 — Topological Identity & Formal Completion

Defines the universal structure of the attractor: $A \cong SU(2) \backslash U1 \times SU(2) \backslash U2 \times S^1 \backslash \phi \times Z \backslash r$

Completes the first RBS-D framework mathematically, topologically, dynamically, and empirically.

Identifies the universal relaxation time $t_{\text{relax}} = 202$.

5. Final Section: Beginning of the New Project — RBS-D Framework² (Publications 25+)

With Publication 24, the first RBS-D framework is **fully complete**:

- mathematically
- topologically
- dynamically
- empirically

- structurally

All further tests, extensions, and specialized investigations will **not** be developed within the first framework.

They form a **new, independent project**:

RBS-D Framework²

(Beginning with Publication 25)

The second framework will develop:

- new role spaces
- new operator families
- new topological classes
- new empirical tests
- new mathematical extensions

and will carry the theory into its next evolutionary phase.
